

DBLT Accessories for dryer exhaust fans

Reduces lint accumulation in the ductwork and dryer vent.

Clothes dryer lint is combustible. Given the right conditions, it can self-ignite. The lint trap **DBLT 4W** installed on the exhaust duct helps reduce the risk of fire.

- Reduces lint accumulation in the ductwork and dryer vent
- Minimizes the risk of a dryer fire
- Suitable for a 4" duct
- Designed to use with a DEDPV or dryer exhaust fan
- Designed to use with residential electric dryers only

Built-in Screen filter

The lint trap box comes with a screen that filters the air that feeds into the dryer exhaust fan. The less lint accumulation, the better your dryer performs.

Limitations

DBLT4W is not designed to be used without a duct power dryer exhaust ventilator DEDPV or inline duct booster fan.

The lint trap DBLT 4W is made of galvanized metal and fits a 4-inch duct.

This lint trap must be used when the duct length between the dryer and exhaust fan is between 5 and 15 linear feet.
