

ECO-Touch[®] IAQ

Advanced VOC-sensing Technology

Smart Air on Tap

The **ECO-touch® IAQ** is the **FIRST** integrated VOC-sensing controller on the market. The original **ECO-touch** was designed to transform a Fantech HRV or ERV into a true Fresh Air Appliance and smart features have taken the ultimate Fresh Air Solution to the next level.

ECO Mode + Auto IAQ

The signature mode of the original ECO-touch is alive and well. But now ECO-touch is utilizing advanced sensory technology to create the first controller on the market that can automatically adjust air flow when VOCs are detected. From cooking fumes to smelly garbage, your Fresh Air Appliance is on Auto-Pilot.

New Look

A sleek bezel and touch display will seamlessly blend into your modern home or project.

Compatibility

New or old, your system configuration may be compatible with the new and improved controller as long as it has the RV-CTRL board with the 5 pin terminal block.

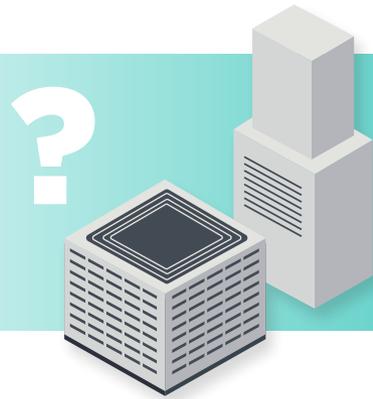

HERO HERO SERIES Fresh Air Appliance

DID YOU KNOW?

A standard Heating and Cooling system contributes little, if nothing, to the Indoor Air Quality (IAQ) in your home or new construction.

The **NEW** ECO-family

The **NEW Wireless Push Button** exclusively ties in with the **ECO-Touch IAQ** for ventilation on-demand in 20, 40, or 60 minute intervals for bathroom applications.

The **ECO-Touch IAQ** takes all the features from the original ECO-touch and makes a tangible difference with **NEW** VOC-sensing technology.

The **NEW ECO-Feel** is pre-programmed with ECO-mode and is great for multi-family or commercial solutions where tampering is not ideal.
